With a commitment to bringing the urology community a state of the art, advanced course highlighting the research and advancements in urology, URO-TRACK offers practicing urologists a unique opportunity to update their clinical knowledge in an excitingly rigorous and interactive environment.

Through didactic presentations, debates, panel discussions and case conferences, attendees will interact with expert sub specialists from the collaborating universities to gain instruction in diagnosis, evaluation and management of difficult urological problems. Care of urological patients has become increasingly complex. The rapid pace of clinical research and new surgical innovations is accelerating across all the sub-specialties of urology. Consequently, it is now critically important that both physicians, physician extenders and nurses involved in urological patient care stay abreast of recent developments.
